Q1. [Report] Create a Delivery Performance Report grouped by Client Name showing Total Shipments, On-Time Deliveries, Delayed, Failed, and SLA Compliance Rate % (On-Time / Total* 100). Apply Conditional Styling: SLA Compliance < 85% in Red, 85–95% in Amber, > 95%in Green. Add prompts for Client Industry and Route Name. Add Header with SwiftRoutebranding, Footer with 'Operations Confidential'.

Objective

Create a Delivery Performance Report that will:

- Show Total Shipments, On-Time Deliveries, Delayed Deliveries, Failed Deliveries, and SLA Compliance Rate.
- Group the data by Client Name.
- Apply conditional styling to the SLA Compliance Rate:
  - Red if SLA Compliance is less than 85%
  - Amber if SLA Compliance is between 85% and 95%
  - Green if SLA Compliance is greater than 95%
- Add prompts for Client Industry and Route Name.
- Add a Header with the title "SwiftRoute Trading".
- Add a Footer with the text "Operations Confidential".

Step 1: Understanding the Requirement

First, I understood the problem.The goal was to create a report to track delivery performance based on:

- Total Shipments
- On-Time, Delayed, Failed Deliveries
- SLA Compliance Rate

Step 2: Preparing the Data

I checked the dataset and made sure it had these fields:

- Shipment ID

- Delivery Status
- Client Name
- Route Name
- Client Industry

These fields are important for calculations and grouping.

Step 3: Creating the Report in IBM Cognos

- I opened IBM Cognos Analytics
- Clicked on New Report
- Selected List Report
- Added dataset

Step 4: Grouping the Data

- Dragged Client Name into the report
- Grouped the report by Client Name.So each client's performance can be seen separately

Step 5: Creating Calculations

I created the following calculations:

- Total Shipments

  count([Shipment ID])

- On-Time Deliveries

  count(case when [Delivery Status] = 'On-Time' then 1 else null end)

- Delayed Deliveries

  count(case when [Delivery Status] = 'Delayed' then 1 else null end)

- Failed Deliveries

  count(case when [Delivery Status] = 'Failed' then 1 else null end)

- SLA Compliance Rate

  (count(case when [Delivery Status] = 'On-Time' then 1 else null end)

/ count([Shipment ID])) * 100

Client Name	Shipment ID	Delivery Status
Amazon India	SHP00014	Failed
	SHP00016	Failed
	SHP00017	Delayed
	SHP00019	Delayed
	SHP00022	Failed
	SHP00031	Delayed
	SHP00037	Failed
	SHP00047	Delayed
	SHP00054	On-Time
	SHP00061	Failed
	SHP00063	Delayed
	SHP00066	Delayed
	SHP00068	Delayed

Step 6: Applying Conditional Styling

I applied styles to SLA Compliance:

- Less than 85% → Red
- 85% to 95% → Amber
- Greater than 95% → Green

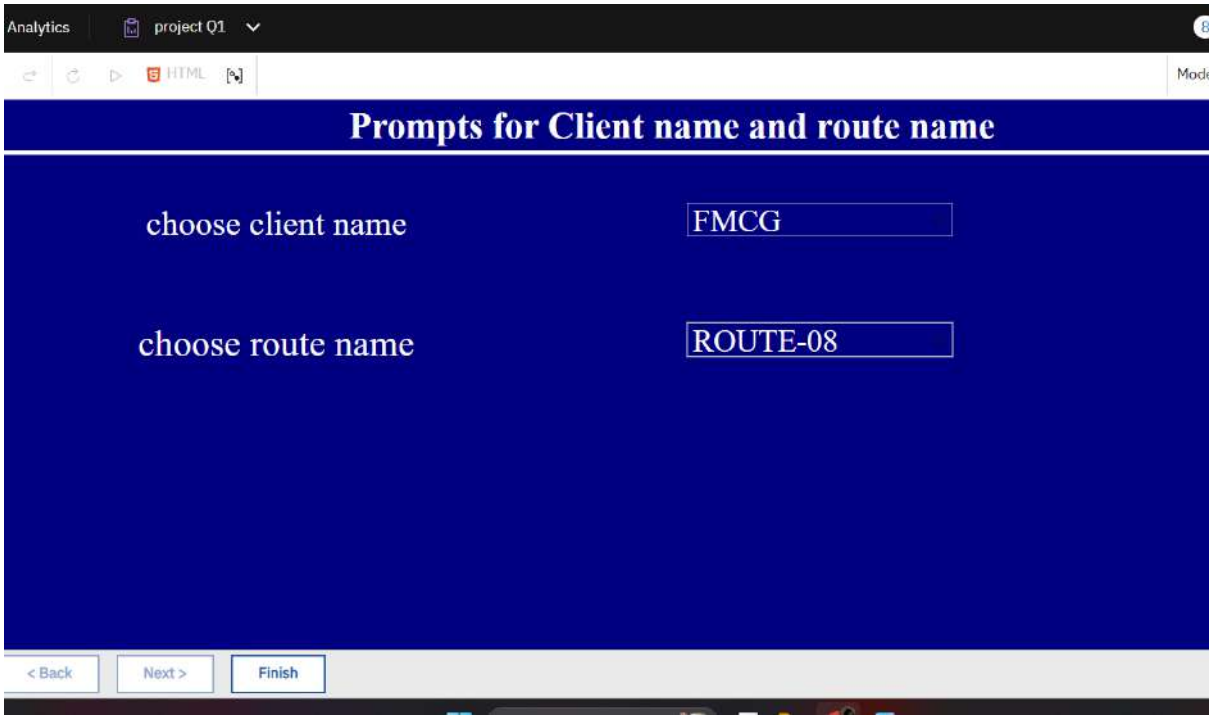
This helps to easily identify performance.

	SHP00178	Delayed
	SHP00182	Failed
	SHP00184	Delayed
	SHP00199	Failed
Total shipments	**39**	
Failed deliveries		**15**
Delayed deliveries		**19**
On-Time deliveries		**5**
SLA compliance rate		**12.8%**
BigBasket	SHP00011	Delayed

Step 7: Adding Prompts

- Added prompt for Client Industry
- Added prompt for Route Name

This allows users to filter and view specific data.



Step 8: Adding Header and Footer

Added Header: “SwiftRoute Trading”

SwiftRoute Logistics - Delivery Performance Report

Client Name	Shipment ID	Delivery Status
HUL	SHP00001	On-Time
	SHP00006	Delayed
Total shipments	2	
Failed deliveries		0
Delayed deliveries		1
On-Time deliveries		1
SLA compliance rate		50.0%
Overall - Count	2	
Overall		0
Overall		1
Overall		1

- Added Footer: “Operations Confidential”

Client Name	Shipment ID	Delivery Status
HUL	SHP00001	On-Time
	SHP00006	Delayed
Total shipments	2	
Failed deliveries		0
Delayed deliveries		1
On-Time deliveries		1
SLA compliance rate		50.0%
Overall - Count	2	
Overall		0
Overall		1
Overall		1
Overall		0.5

Operations Confidential

Step 9: Final Output

- Verified all calculations
- Checked grouping and filters
- Ensured report is clear and readable

SwiftRoute Logistics - Delivery Performance Report

Client Name	Shipment ID	Delivery Status
HUL	SHP00001	On-Time
	SHP00006	Delayed
Total shipments	2	
Failed deliveries		0
Delayed deliveries		1
On-Time deliveries		1
SLA compliance rate		50.0%
Overall - Count	2	
Overall		0
Overall		1
Overall		1
Overall		0.5

Operations Confidential

Conclusion

By following these steps, I successfully created a report that helps analyze delivery performance and improve business decisions.
