Q6. [Story Making] Create a Cognos Story for SwiftRoute's Monthly Fleet Review: Scene 1 —Operations Overview & Fleet Statistics, Scene 2 — Client SLA Compliance Performance, Scene 3 — Delivery Failure & Damage Analysis, Scene 4 — Vehicle Breakdown Trends & FleetHealth, Scene 5 — Driver Performance & Fuel Efficiency, Scene 6 — Route Optimization & Cost Reduction Recommendations.

Objective

Create a Cognos Story to analyze monthly fleet performance and identify operational issues. The story helps in:

- Monitoring overall operations
- Evaluating client SLA performance
- Identifying delivery failures and damages
- Analyzing vehicle breakdown trends
- Comparing driver performance
- Recommending route optimization strategies

Step 1: Understanding the Requirement

First, I understood the problem. The goal was to create a **story with multiple scenes** to present insights clearly.

The story includes:

- Operations Overview
- SLA Compliance Performance
- Delivery Failure & Damage Analysis
- Vehicle Breakdown Trends
- Driver Performance & Fuel Efficiency
- Route Optimization & Cost Reduction

Step 2: Preparing the Data

I checked the dataset and ensured it contains:

- Shipment ID
- Delivery Status
- Client Name

- Vehicle Type
- Breakdown Flag
- Damage Flag
- Fuel Cost
- Distance
- Fuel Used
- Driver Name
- Rating
- Route
- Date

These fields are required to build all scenes.

Step 3: Creating the Story in IBM Cognos Analytics

- Opened Cognos Analytics
- Clicked **New → Story**
- Selected **Blank Story**
- Added data module (SwiftRoute dataset)

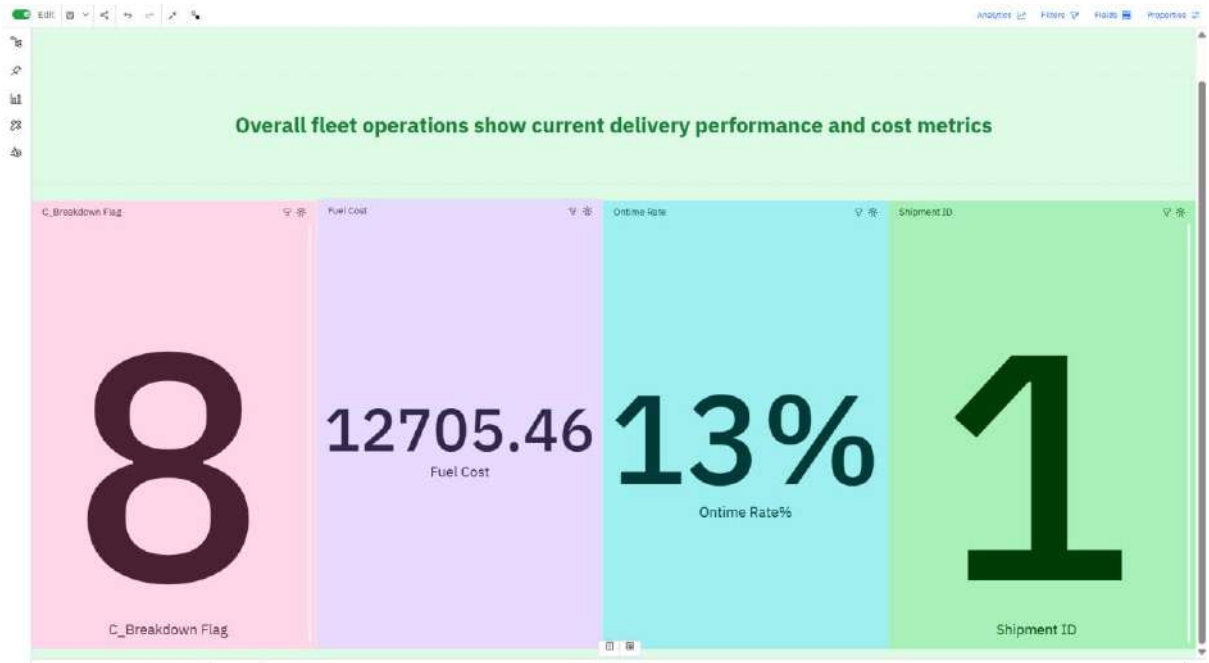
Cognos Story for SwiftRoute's Monthly Fleet Review

Step 4: Scene 1 – Operations Overview & Fleet Statistics

Added:

- KPI Tiles:
    - Total Shipments
    - On-Time Delivery Rate %
    - Breakdown Count
    - Total Fuel Cost
- Summary visualization (Bar or KPI view)

Insight:
Overall operations performance and fleet usage are visualized for quick understanding.



Step 5: Scene 2 – Client SLA Compliance Performance

Added:

- Bar Chart → SLA Compliance by Client
- Optional filter → Client / Route

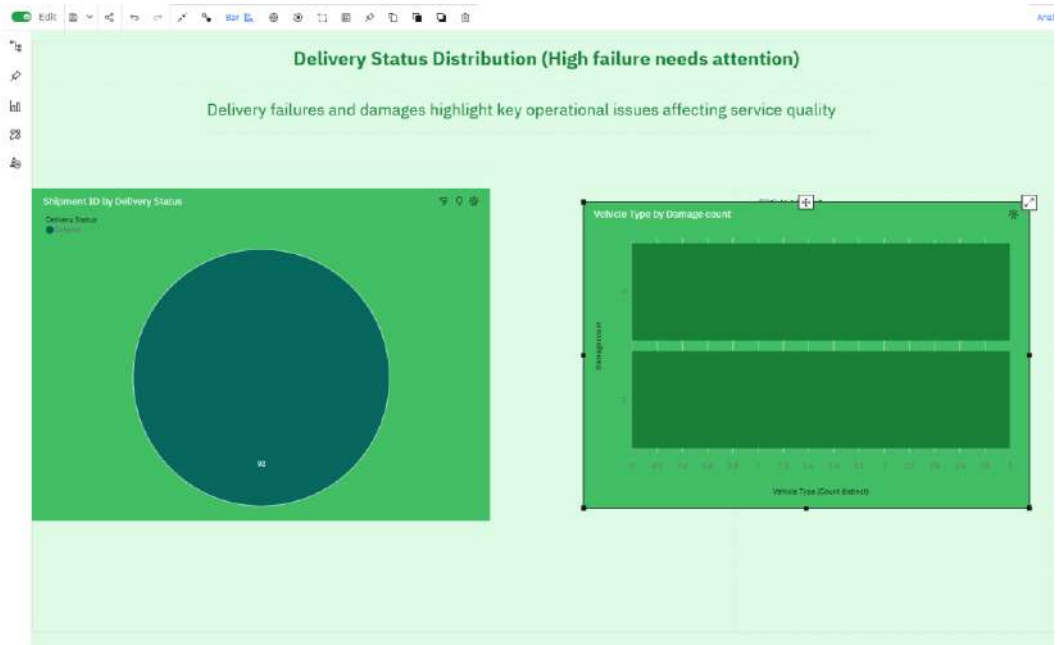
Insight:
Some clients show lower SLA compliance indicating service delays and operational inefficiencies.

Step 6: Scene 3 – Delivery Failure & Damage Analysis

Added:

- Pie Chart → Delivery Status Distribution
- Chart → Damage Count

Insight:
Failed and damaged deliveries highlight service quality issues and areas needing improvement.

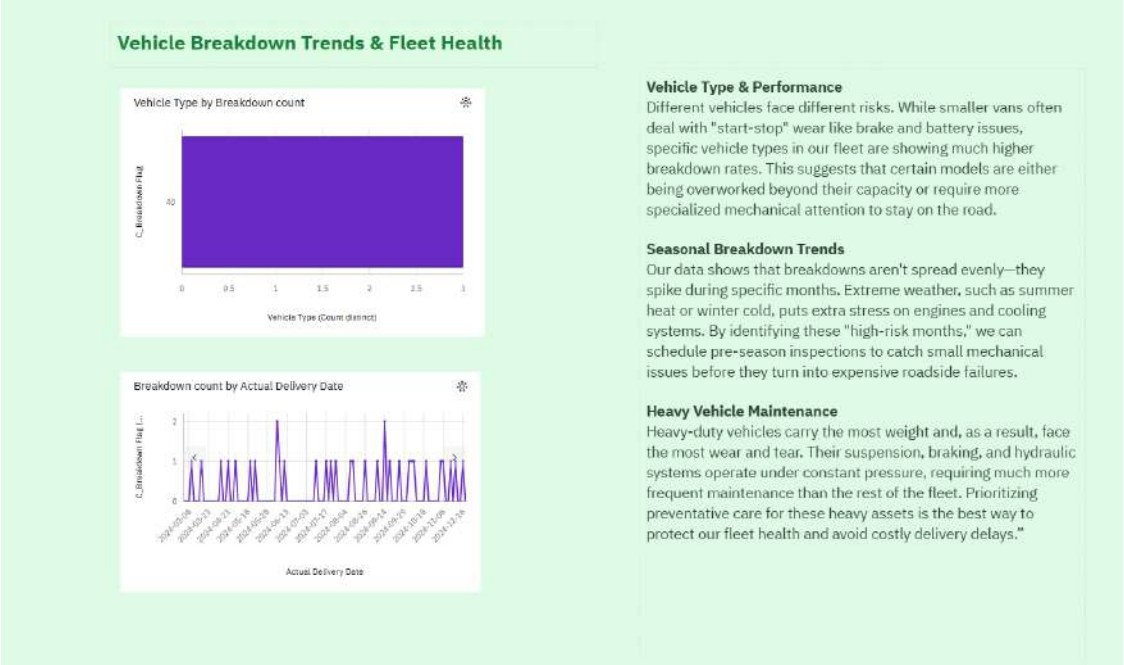


Step 7: Scene 4 – Vehicle Breakdown Trends & Fleet Health

Added:

- Bar Chart → Breakdown Count by Vehicle Type
- Line Chart → Breakdown Trend over time

Insight:
Certain vehicle types show higher breakdown frequency, affecting fleet reliability.

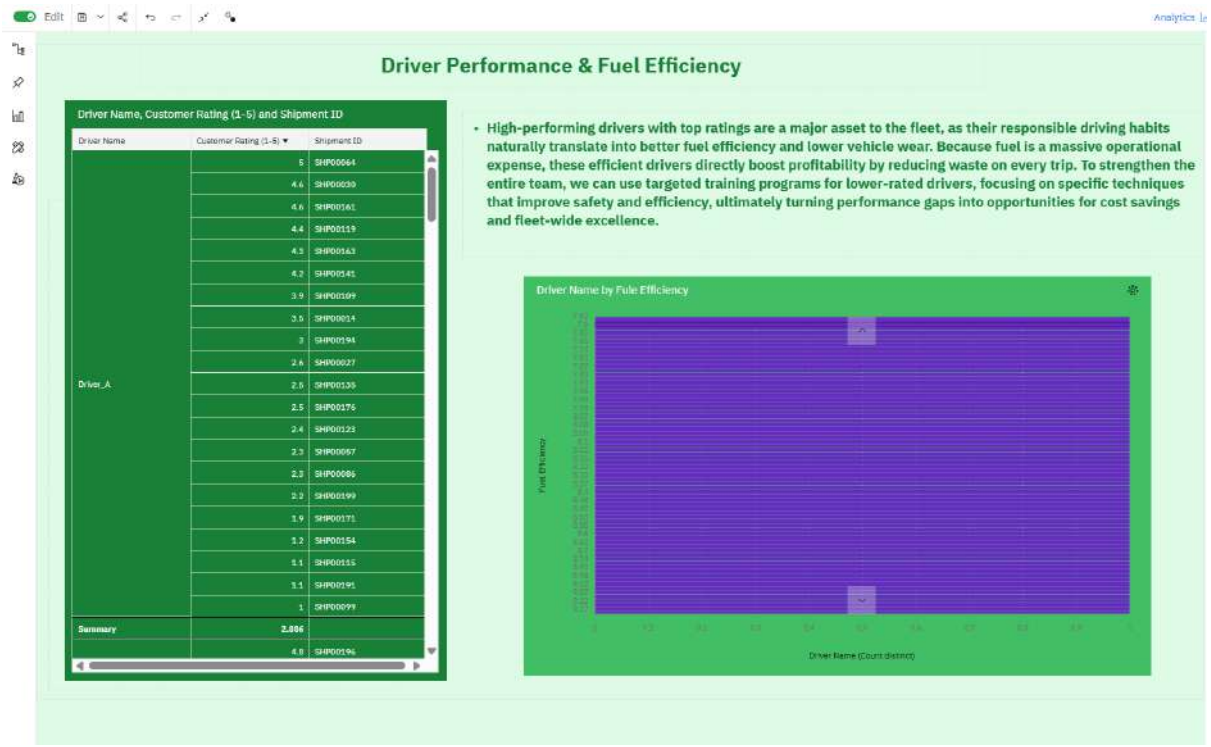


Step 8: Scene 5 – Driver Performance & Fuel Efficiency

Added:

- Table → Driver Performance (Rating)
- Bar Chart → Fuel Efficiency (Distance / Fuel Used)

Insight:
Drivers with better ratings tend to show improved performance and fuel efficiency.



Step 9: Scene 6 – Route Optimization & Cost Reduction

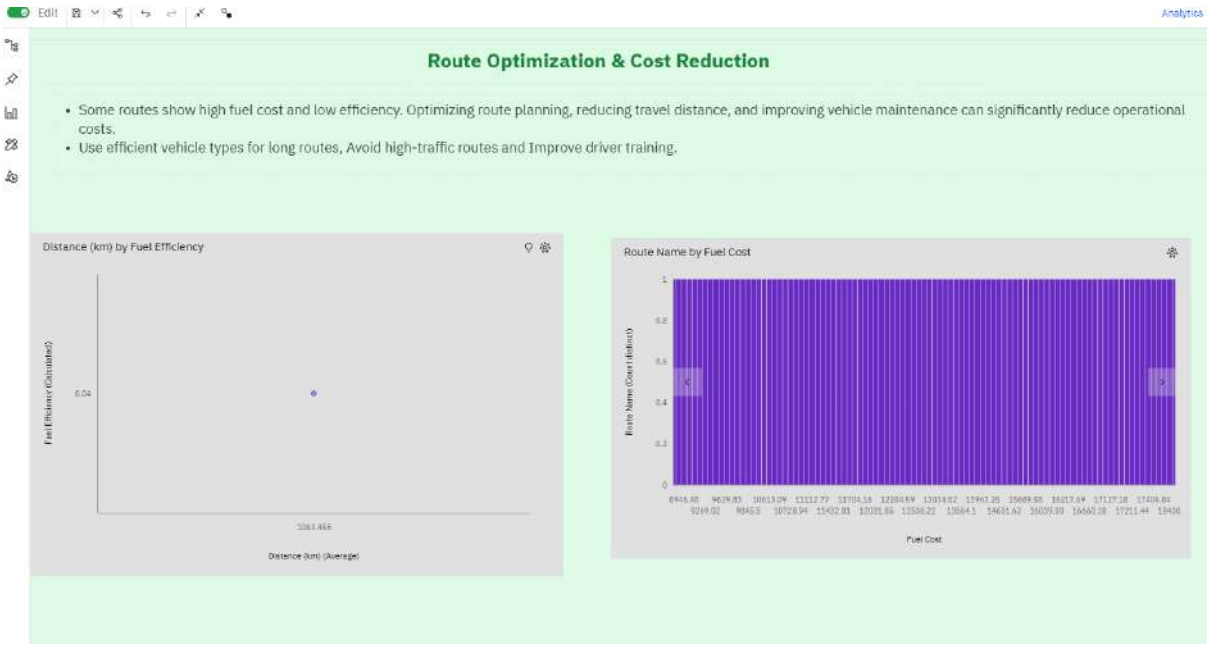
Added:

- Bar Chart → Fuel Cost by Route
- Scatter Plot → Distance vs Fuel Efficiency

Filtered:

- Low efficiency routes
- High fuel cost routes

Insight:
Some routes have high cost and low efficiency, indicating the need for optimization.



Step 10: Adding Notes (Annotations)

For each scene, added text notes explaining:

- Key observations
- Problem areas
- Recommendations

Step 11: Final Verification

- Checked all visuals
- Verified calculations
- Ensured filters work properly
- Confirmed story flow is clear

Conclusion`

By creating this story, I was able to analyze fleet performance, identify problem areas such as low SLA compliance, high breakdown vehicles, and inefficient routes. The story provides clear insights that help improve delivery efficiency, reduce costs, and enhance overall operational performance.
